EXPENSE BILLS, ON YOUR PHONE

SnapBill

Snap it › Check it › Hand it over

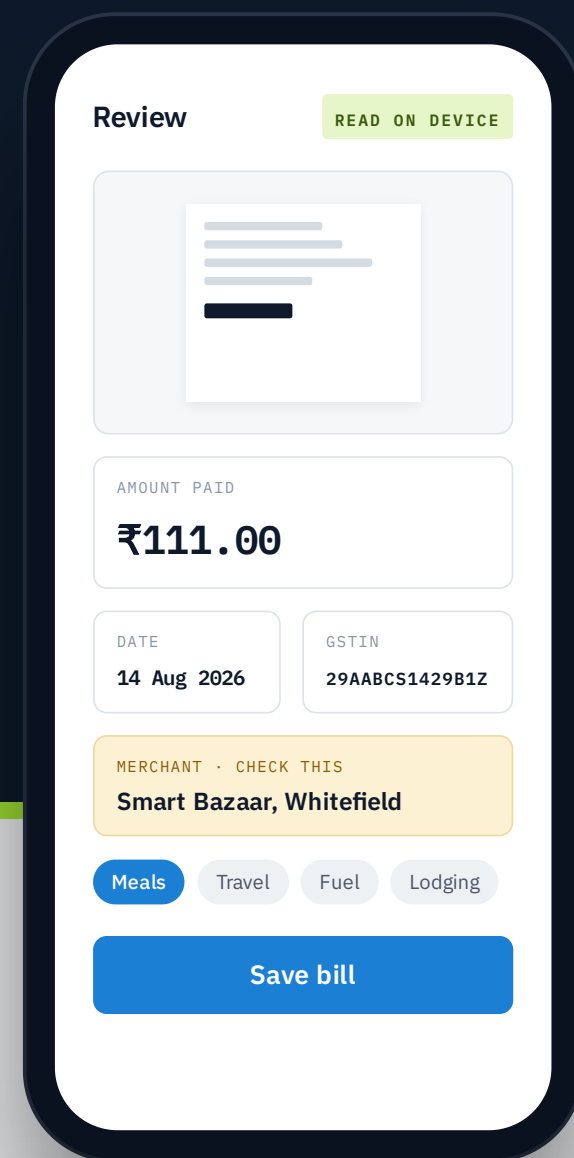

Your bills, captured and handed over — without the year-end scramble.

SnapBill photographs an expense bill and reads the amount, date, merchant and GST off it — on the phone itself, with no account and no internet. When accounts asks, export a date range as a ZIP with an Excel summary and share it.

READS BILLS ON-DEVICE

WORKS OFFLINE

NO ACCOUNT, NO CLOUD

Nothing to set up, nothing to sign into. The first bill is filed in the time it takes the card machine to print.

01 • AT THE COUNTER

Snap it

The camera opens with a guide frame. Five checks run instantly — blur, glare, cut-off edges, unreadable print — each offering **Retake** or **Use anyway**. PDF invoices arrive through **Import**.

02 • ONE GLANCE

Check it

Fields the app is sure of are already filled. **Amber means “check this one”**. A missing amount or date won’t let the bill save — and corrections stick: set a shop’s category once and it holds.

03 • WHEN ACCOUNTS ASKS

Hand it over

Choose a range, generate, share the ZIP through any app. Exporting marks nothing: **Mark as Submitted** is a separate, deliberate tap, so pending and handed-over never blur.

ONE FILE ACCOUNTS CAN JUST OPEN

Every bill image, plus an Excel summary

One row per bill — date, merchant, category, amount, GST number, payment type, notes — beside the image it came from. A manifest carries the same records machine-readably, so a finance system can ingest it without re-typing.

BY DESIGN, NOT BY SETTING

Your bills never leave your phone

Built for the bills people actually get handed — metre-long supermarket strips, multi-page hotel folios, sideways photos, PDF invoices from mail or WhatsApp.

- ✓ No account, no sign-in, no server — nothing on the other end.
- ✓ Every photo and record sits in the app’s private storage; the reading happens on the phone’s own hardware.
- ✓ No analytics, no tracking, no third-party SDK.
- ✓ Data leaves only as an export you share yourself — one file, one deliberate action, to a place you choose.

Try it on your own bills

Available on both Android and iOS
