

**TaskLive**

EXPENSE BILLS, ON YOUR PHONE

SnapBill

Snap it > Check it > Hand it over**Your bills, captured and handed over —
without the year-end scramble.**

SnapBill photographs an expense bill and reads the amount, date, merchant and GST off it — on the phone itself, with no account and no internet. When accounts asks, you export a date range as a ZIP with an Excel summary and share it.

Save bill

Captured at the counter

A few seconds while the card machine prints. Quality checks flag a blurred or cut-off photo before you walk away — and never block you.

Read, not typed

Amount, date, merchant, invoice number and the GST breakup come off the bill itself. Only what the app is unsure of asks for your eyes.

Handed over in one file

Pick a month, get a ZIP: every bill image plus an Excel summary accounts can open straight away. Share it by mail, chat, drive — your call.

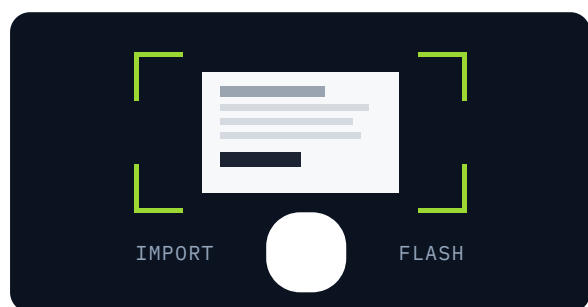

A TaskLive product from BLS Software Pvt Ltd

tasklive.ai

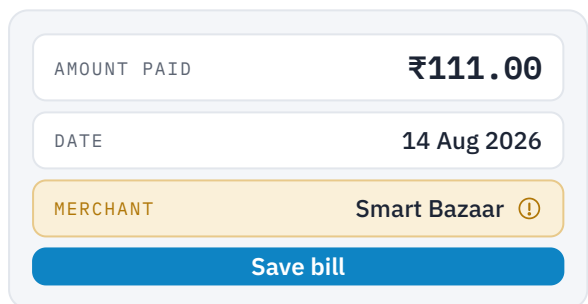

Four steps, and the year-end scramble is gone

Nothing to set up, nothing to sign into. Install it, and the first bill can be filed in the time it takes the card machine to print.

01 Snap it

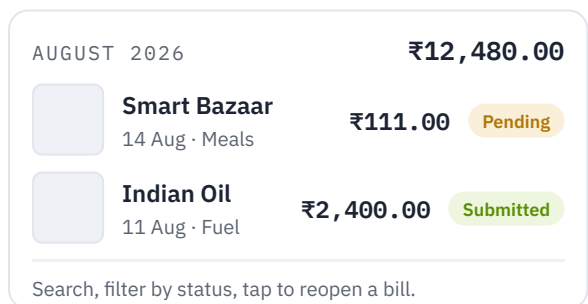

The app opens on the camera with a guide frame. Shoot, and five checks run instantly — blur, glare, cut-off edges, unreadable print — each offering **Retake** or **Use anyway**. PDF invoices arrive through **Import**.

AMOUNT PAID	₹111.00
DATE	14 Aug 2026
MERCHANT	Smart Bazaar ⓘ
Save bill	

02 Glance at the amber

Fields the app is sure of are already filled. Amber means “check this one”. A missing amount or date will not let the bill save at all — and corrections stick: set a shop’s category once and it holds.

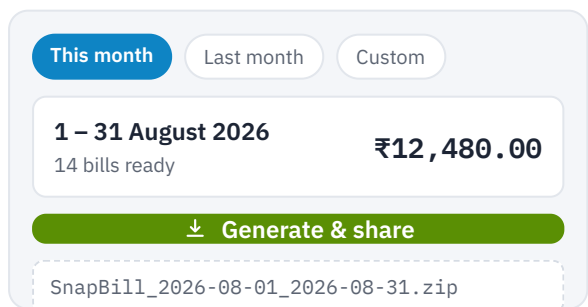

AUGUST 2026		₹12,480.00
	Smart Bazaar 14 Aug · Meals	₹111.00 Pending
	Indian Oil 11 Aug · Fuel	₹2,400.00 Submitted

Search, filter by status, tap to reopen a bill.

03 It files itself

Bills drop into their month with a running subtotal, breakdowns by category and payment, and a pending-or-submitted chip per row. Shoot the same bill twice and it says when you first captured it.

This month		Last month	Custom
1 – 31 August 2026		₹12,480.00	
14 bills ready			
Generate & share			
SnapBill_2026-08-01_2026-08-31.zip			

04 Hand it over

Choose a range, generate, share the ZIP through any app on the phone. Exporting marks nothing: **Mark as Submitted** stays a separate, deliberate tap, so pending and handed-over never blur.

✓ All four steps work in airplane mode. The only thing that ever leaves the phone is the export you share yourself.

Built for the bills people actually get handed

FIELDS READ OFF THE BILL

Amount paid, date, merchant and address, invoice number, GSTIN, and the CGST / SGST / IGST breakup on Indian receipts.

AWKWARD BILLS HANDLED

Metre-long supermarket strips read section by section, multi-page hotel folios joined into one bill, sideways photos straightened.

PAPER AND PDF ALIKE

Photograph a printed bill, or import the PDF invoice that came by mail or WhatsApp. Both are read the same way.

YOUR OWN VOCABULARY

Categories and payment types are yours to edit — add a card, a cost head, a client name, and it is simply there on the next bill.

LOCKED IF YOU WANT IT

An optional PIN on the app itself, for a phone that gets handed around. Off by default; you decide.

THE MONTH AT A GLANCE

Monthly totals, spend by category and payment type, and a clear count of what is still pending before you export.

One file your accounts team can just open

The Excel sheet has one row per bill — date, merchant, category, amount, GST number, payment type, notes — next to the image it came from. The manifest carries the same records in machine-readable form with a fingerprint of every image, so a finance system can ingest the package later without anyone re-typing a thing.

Your bills never leave your phone BY DESIGN, NOT BY SETTING

- ✓ No account, no sign-in, no server. There is nothing to log into, because there is nothing on the other end.
- ✓ No analytics, no tracking, no third-party SDK watching what you spend.
- ✓ Every photo and record sits in the app's private storage on the device, and the reading happens on the phone's own hardware.
- ✓ Data leaves only as an export you share yourself — one file, one deliberate action, to a place you choose.

Everything lives on the device, so uninstalling the app deletes the data with it — the monthly export doubles as your safety copy.

Try it on your own bills
